

Chief Editor's Remark

Dear scientists, researchers, reviewers and readers of the Nigerian Journal of Space Research (NJSR), it is with great sense of responsibility and enthusiasm that I welcome you all to our journal. To say the least, I am very much delighted to assume the position of Chief editor of this journal. Within the period of over ten years existence of NJSR, covering scientific researches in various areas of space science and technology, the journal has kept its primary objective as a professional medium for the publication/dissemination of the scientific works, findings and discoveries of scientists and researchers in Nigeria and other parts of the world.

In these years, The NJSR through dedication and zeal for professionalism has gone through different positive stages of development pioneered by devout and capable editorial team and reviewers of which we are most grateful for their creative contribution. The most recent development in the NJSR is the acquisition of a web presence via <https://www.njsr.org.ng>, the **Online Print ISSN: 2550-7893**, newly constituted editorial board, reviewers and a change in the cover page design as a sign of the dynamism of the Journal.

It is important for us to constantly remind ourselves of the need to using our scientific knowledge and engineering capabilities in solving our problems and addressing other sustainable development goals of which space science and technology has been identified as the appropriate tool. It is on this note that NJSR emerged to embrace the present economic and environmental challenges facing mankind especially in tailoring our scientific research works and findings not only in promoting space science and technology but also in solving our immediate human and environmental challenges and problems such as climate change, global peace, security and terrorism, sustainable cities and communities, clean energy, drought, clean water and sanitation, improved aquatic and terrestrial life as well as quality health delivery system.

As an open academic journal and in keeping with the global journal best practices, NJRS has instituted new editorial team and reviewers made up of industry and academic professionals in space science and technology. The journal is also indexed in relevant global academic and scientific databases, which we believe will give NJSR the much desired on-line presence and global competitive advantage amongst other journals in the field of space science and technology.

In conclusion, we wish to ask our readers to send us their manuscripts, as well as their suggestions, which will help us in our continued efforts in publishing this journal as well as improving its quality to achieve global readers' experience.

Dr. Halilu Shaba,

Editor-in-Chief, NJSR.
